

IN THE SPECIFICATION

Page 17, please delete the paragraph starting at line 3 and replace it with the following:

Return traffic is defined as one or more packets that are sent from the receiver of a flow back to the sender in response to or in association with the information carried in the original flow. In one embodiment, return traffic is identified by determining whether a flow contains origination IP address and destination IP address values that are opposite to or complementary with the addresses of the original flow. In another embodiment, return traffic is identified by determining whether a flow contains origination port address and destination port address values that are opposite to or complementary with the addresses of the original flow as well. ~~(wanted to say here that both IP and port addresses are..)~~
